Catastrophic Plate Tectonics theory (Creationist - Dr. John Baumgartner) CPT

The Flood was initiated as slabs of oceanic floor broke loose and subducted along thousands of kilometers of pre-Flood continental margins. Deformation of the mantle by these slabs raised the temperature and lowered the viscosity of the mantle in the vicinity of the slabs. A resulting thermal runaway of the slabs through the mantle led to metres per second mantle convection. Cool oceanic crust which descended to the core/mantle boundary induced rapid reversals of the earth's magnetic field. Large plumes originating near the core/mantle boundary expressed themselves at the surface as fissure eruptions and flood basalts. Flow induced in the mantle also produced rapid extension along linear belts throughout the sea floor and rapid horizontal displacement of continents. Upwelling magma jettisoned steam into the atmosphere causing intense global rain. Rapid emplacement of isostatically lighter mantle material raised the level of the ocean floor **displacing ocean water onto the continents**. When virtually all the pre-Flood oceanic floor had been replaced with new, less-dense, less-subductable, oceanic crust, catastrophic plate motion stopped. Subsequent cooling increased the density of the new ocean floor, **producing deeper ocean basins and a reservoir for post-Flood oceans**.

Hydroplate Theory: (Creationist - Dr. Walter Brown) HPT

Before the global Flood, **considerable water was under the earth's crust**. Pressure increased in this subterranean water ruptured that crust, breaking it into plates. The escaping water flooded the earth.

Because hydro means water, those crustal plates will be called hydroplates. Where they broke, how they moved, and hundreds of other details and evidence – all consistent with the laws of physics—constitute the hydroplate theory and explain to a great extent why the earth looks as it does." Excerpt from *In The Beginning* by Dr. Walt Brown, pg. 105

Plate Tectonics theory: (secular geologist's theory) PT

According to this theory, earth's crust is composed of many plates, each 30-60 miles thick. **They move relative to each about an inch per year--the rate at which a fingernail grows**. Continents and oceans ride on top of these plates. Sometimes a continent, such as North America, is on more than one plate....The idea of continental drift, inspired by the observation that the continents fit together like pieces of a giant jigsaw puzzle, provided strong evidence for the theory that later developed as *plate tectonics*."
