(See the backside for a detailed explanation)

The Genesis Flood is the most controversial event in the book of Genesis today (2 Peter 3:5-6). The literal existence of the worldwide flood destroys the entire modern scientific geological column and its deep-time counterpart.

Is there any evidence of this catastrophic event? Using drone videography, Dr. Kevin Horton first examines a known catastrophic event (the Glacial Lake Missoula Flood) as a model to define what massive flooding will leave behind. With their vision now trained to see the world from the bird's eye view, he then takes his audience on numerous flights across the central and western US to see for themselves the Flood of Genesis.

After viewing this highly visual presentation, you will never see the landscape the same again!

NOTE: This presentation is valuable to both the scientifically trained and to families with children. (I recommend high school and above for this full version).

It was presented last year to the geology section at the Annual Meeting of the Creation Research Society. It has also been presented (shorter versions) to 4-6th grade students with equal success.
